LIVE FROM THE GREAT BEAR:

Furthering Research, Education, and Citizen Science

Over the course of the last few months, Pacific Wild staff have set up two high definition (HD), pan-tilt-zoom (PTZ) cameras —[one on a remote sea lion rookery](#) off the far west coast and the [second in a sheltered, rich, and diverse salmon-bearing stream](#) in the heart of the rainforest.

The data are transmitted to our mountaintop relay site, back into our lab on Denny Island, out to a satellite in space, and [onto your personal computer](#) anywhere in the world where you can watch the hidden world of the Great Bear Rainforest unfold live.

Along with our Heiltsuk First Nation partners, we are using this camera technology in conjunction with our [hydrophone network](#) to enhance our marine mammal monitoring efforts. As well, we bring the high quality feeds into the Bella Bella Community School where students can operate the cameras as a part of the [SEAS Community Initiative](#).

This non-invasive technology has captured an unprecedented level of fishing behaviour by a pack of wolves. Photo by Ian

McAllister.

Now you can join us as we watch [wild coastal wolves](#), [nesting sea birds](#), [resident killer whales](#), and other rarely observed coastal wildlife. Visit www.pacificwild.org to view these live streams and sign up for alerts via [text message](#), [email](#), [Facebook](#) and [Twitter](#). Additionally, we encourage you to participate in the research and [let us know](#) when you witness any wildlife sightings via these live video streams.

Thank you for sharing in this exciting milestone. We hope you enjoy witnessing the Great Bear Rainforest in action!

Sincerely,

Sarah Stoner
Development Director
